QSSI to Support the HHS Centers for Medicare & Medicaid Services CMIS PULSE Contract

Columbia, MD — Maryland based QSSI was recently awarded a contract in partnership with FEI Systems, Inc. (FEI) by the Department of Health & Human Services (HHS), Centers for Medicare & Medicaid (CMS) to provide Business Intelligence (BI) support to the Medicare Contractor Management Group (MCMG). This five-year contract will support and maintain the CMS Contractor Management Information System (CMIS) and Production Performance Monitoring System (PULSE) computer systems.

The CMIS is a dynamic web-based Information Technology (IT) system that enables CMS to effectively manage, monitor, and report on the performance of its Medicare Fee-For-Service (FFS) contractors. The system contains workload-reporting capabilities that allow data to be used for estimating budgets, defining operating problems, and comparing performance among contractors.

The PULSE provides real-time analysis of claims processed, providing CMS with immediate feedback to critical performance issues for all Medicare contractors, as well as Common Working File (CWF) hosts. PULSE utilizes a DB2 database to house data for “real-time” contractor claims workload-reporting.

QSSI and FEI will provide all necessary services, qualified personnel, material, and equipment associated with modifications and enhancements made to the CMIS and PULSE applications. QSSI and FEI will also provide technical support, analysis, and training to CMS associates.

About QSSI

Founded in 1997, QSSI is a rapidly growing firm with a broad set of information technology solution offerings. A SEI CMMI® Maturity Level 3 firm, QSSI focuses on enterprise software development, security and privacy services, and critical IT infrastructure solutions as core competencies. QSSI has successfully performed on over 200 Federal civilian contracts and has over 400 IT professionals. Additional information about QSSI may be found at www.qssinc.com.
